MONTHLY WEATHER MAP

AUGUST 1960

LIBRARY 960 WEATHER BUREAU

General Summary of Weather Conditions

The weather for August was marked by dry weather on both coasts, resulting in widespread forest fire damage in British Columbia and all the Atlantic Provinces. A sharp change in the circulation pattern in the last half of the month gave a drastic weather change in Western Canada from hot and dry to cool and moist.

In the Province of British Columbia the first part of August was very much different from the last part. Up until the 13th of the month the weather was hot and dry resulting in many costly forest fires. During this period a number of stations set new record highs, for example Vancouver 92, Hope 101, Patricia Bay 94 and Nanaimo 98. No less than three stations in the province reported a high for the month of 102°; they were Lytton, Hells Gate and Alberni (McCoy Lake). Beginning on the 13th of the month cold moist air brought repeated rain and much below normal temperatures. Averaged over the whole month, mean temperatures were 3 to 4 degrees below normal in the central and southern parts of the province except for a few stations along the Pacific Coast of Vancouver Island which reported normal or slightly above normal temperatures. In the northern part of the province there were temperature excesses of one to three degrees.

Repeated rains for the last half of the month more than made up for the dry start. At Hope, for instance, measurable rain was reported on fifteen of the last eighteen days of the month. Almost all parts of the province received above normal amounts for the month with stations in the Bulkley valley reporting two to three times normal and many stations on Vancouver Island over twice normal. In the southern interior valleys, on the other hand, excesses ranged from thirty to ninety per cent while a few stations in the upper part of the Fraser Valley experienced deficiencies of about fifty per cent.

In the Provinces of Albert and Saskatchewan the first half of August followed the pattern set in July when record-breaking heat was experienced. Ninety-degree temperatures were experienced at most stations in southern Saskatchewan and southeastern Alberta with the highest temperature in the two provinces being reported at Yellowgraww, where 98 was experienced. Temperatures were cool during the last ten days of the month. Mean temperatures for the month averaged normal or one degree above normal in southern Saskatchewan and two to three degrees above normal in western Saskatchewan and the Peace River district.

As is usual in August precipitation on the Prairies came mostly from thunderstorms and was irregularly distributed. Most noticeable storms occurred on August 4th and 5th when three inches of rain fell at Edmonton and on August 22nd and 24th when falls of one to two inches were experienced in western Saskatchewan and eastern Alberta, with nearly three inches in Lloydminster and at Cold Lake. On August 3rd a tornado struck near Travers Dam in southern Alberta killing one person. The irregular nature of the distribution of precipitation was shown in the range from two to three times normal at some stations down to deficiencies of 75 per cent at others with no simple pattern evident.

August mean temperatures were one to three degrees above normal throughout Manitoba. A mean temperature of 69 at Gretna was the highest reported from any station in Western Canada. On August 2nd a disturbance moving eastward gave heavy rains and high winds over southwestern Manitoba ending a month-long drought in these areas. The total precipitation for the month was generally above normal. Amounts ranged upward to seven inches at Gimli which was just over three times the normal. It was the wettest August since 1944 when records began at that station. By contrast the month was very dry at The Pas where only 0.40 inch of rain fell during the month, the smallest August rainfall since 1912. Other stations in the northern half of the province experienced smaller deficiencies.

As in Manitoba, the northern districts of Ontario experienced above normal temperatures during August, excesses ranging from two to four degrees. In the southern part of the province mean temperatures were not far from normal ranging from two degrees below to two degrees above normal.

More than four inches of rain were reported during the month in the Kapuskasing-Timmins area and in the far western part of the province. In these areas precipitation for the month was above normal, but throughout the remainder of the province there were precipitation deficiencies ranging to fifty per cent except for a few scattered stations in the Trenton area and in the district around Hamilton.

In the Province of Quebec August mean temperatures were normal or one degree above normal in the Montreal-Quebec area and one to three degrees above normal in the Gaspe and Lake St. John districts. There were one to two degrees deficiencies in the upper parts of the Ottawa, Gatineau, and St. Maurice River basins. In the central and northern parts of the province temperatures were within one degree either side of normal.

In southern Quebec there were fewer thunderstorms than are usually to be expected in August, Montreal Airport reporting none at all for the first time since records have been kept at the airport. Total precipitation for the month was above normal in the extreme northern part of the province with Port Harrison receiving two and a half times the long-term average, while at Nichiquon there was a small excess. Throughout most of the remainder of the province there were deficiencies which reached eighty per cent at Fort George and generally ranged to sixty per cent in the southern sections of the province.

No low pressure areas visited the Maritime Provinces during August, although for a time there was a threat that Hurricane Cleo would move into the district. At the last moment it veered off into the Atlantic. It was one of the sunniest months on record with new highs for hours of bright sunshine being established at Halifax, Sydney, Chatham, and Fredericton. Mean temperatures for the month were everywhere above normal, with excesses ranging to three degrees.

August was very dry in the Maritime Provinces. This coupled with the high daytime temperatures and low relative humidities was responsible for widespread forest fires and considerable damage to crops. Chatham with 0.40 inch, and Fredericton with 0.57 inch, reported the smallest August rainfall on record. At Halifax the three-month total of 6.96 inches was less than over a corresponding period in any other season except one, 1928, while August itself was the fourth driest in eighty-seven years of record at Halifax. Precipitation deficiencies ranged from 40 to 80 per cent in northern New Brunswick, from 70 to 90 per cent in southern New Brunswick and Prince Edward Island and from 40 to 80 per cent in Nova Scotia.

August was warm and dry on the Island of Newfoundland. Mean temperatures for the month were one to two degrees above normal throughout the Island. August precipitation totals were 20 to 40 per cent below normal on the Avalon Peninsula and 40 to 70 per cent below normal throughout the remainder of the Island. The warm dry weather resulted in forest fires in many parts of the Island. The total of 213 hours of bright sunshine recorded at St. John's Airport was a new record high for that station.

Along the Labrador coast, mean temperatures for August ranged to two degrees above normal, while precipitation totals were 20 per cent above normal at Goose Bay with deficiencies of 50 per cent at Hopedale and 30 per cent at Cartwright.

August mean temperatures were not far from normal in the Yukon Territory. The coldest was Dawson with a deficiency of one degree, while at Mayo there was a two-degree excess. Precipitation was generally below normal, deficiencies ranging to 50 per cent although Snag was an exception with a 33 per cent excess.

August mean temperatures were one or two degrees below normal in the Mackenzie River valley and on the shores of Great Bear Lake, elsewhere in the Northwest Territories there were excesses of which the greatest were reported from the stations at Isachsen and Eureka of five degrees. August precipitation was only half the normal in the extreme northerly part of the Arctic Archipelago, but this was offset by two to three times the normal fall in the southern part of the Arctic Archipelago. A complicated weather system moving in this area between the 19th and 21st gave very heavy falls at most stations, for instance, 1.88 at Mould Bay which was over twice the previous twenty-four hour record; while a number of other stations had over an inch of rain. There amounts swelled monthly totals to well over the previous record highs for precipitation in any month. In the mainland part of the Northwest Territories the precipitation pattern was confused - excesses ranged to 60 per cent and were more frequent than deficiencies which ranged to 40 per cent.

AUGUST 1960

TEMPERATURE, PRECIPITATION AND SUNSHINE

The temperatures for the month are given in degrees Fahrenheit in the temperature columns under the following headings:

MAX. The highest temperature.
MIN. The lowest temperature.
MEAN The mean temperature for the month.

The remaining columns give the following information:

PRECIP. The total precipitation in inches for the month including the rainfall and the equivalent of the snowfall.
SUN The total hours of bright sunshine for the month.
SNOW ON GRND. The depth of snow in inches lying on the ground at the end of the month (when reported).

The use of A following the station name indicates that the meteorological observations are taken at Airport offices.
